the aim of our book is the investigation of the behavior of strong and weak solutions to the

regular oblique derivative problems for second order elliptic equations linear and quasi linear in the neighborhood of the boundary singularities the main goal is to establish the precise exponent of the solution decrease rate and under the best possible conditions the question on the behavior of solutions of elliptic boundary value problems near boundary singularities is of great importance for its many applications e g in hydrodynamics aerodynamics fracture mechanics in the geodesy etc only few works are devoted to the regular oblique derivative problems for second order elliptic equations in non smooth domains all results are given with complete proofs the monograph will be of interest to graduate students and specialists in elliptic boundary value problems and their applications

this book contains contributions from leading researchers in biomechanics nanomechanics tribology contact mechanics materials science and applications on various experimental techniques including atomic force microscopy afm for studying soft biomimetic and biological materials and objects biologists physicists researchers applying methods of contact mechanics and researchers testing materials using indentation techniques along with many other applied scientists will find this book a useful addition to their libraries moreover several reviews in this book are written as introductions to several important and rather sophisticated research areas such as depth sensing indentation studying of biological cells by afm probes mechanics of adhesive contact and contact between viscoelastic hereditary elastic solids the book containing new theoretical models results of experimental studies and numerical simulations along with reviews of above mentioned areas of contact mechanics in application to biological systems would be beneficial for researchers in many areas of biology medicine engineering mechanics and biomimetics

inverse problems of spectral analysis consist in recovering operators from their spectral characteristics such problems often appear in mathematics mechanics physics electronics geophysics meteorology and other branches of natural science this monograph deals with inverse problems of spectral analysis for ordinary differential equations and aims to present the main results on inverse spectral problems using the so called method of spectral mappings which is one of the main tools in inverse spectral theory the book consists of three chapters and opens with the method of spectral mappings presented in the simplest version for the sturm liouville operator the second chapter deals with the inverse problem of recovering higher order differential operators of the form on the half line and on a finite interval in this chapter the author introduces the so called weyl matrix which is a generalization of the classical weyl function for the selfadjoint second order differential operator the last chapter contains a study on inverse spectral problems for differential equations with nonlinear dependence on the spectral parameter this monograph will be of value and interest to specialists in the field of inverse problems for differential equations
